**\*PLEASE NOTE:** Coating on Black Substrate--since there is no "transmitted" color, use the "reflected" color description. See page K114 for Substrate Chart.

**ORDERING PROCEDURE:**

Add the Color Number to the end of the Stock Number.  
**Example:** Uroboros Black Thin Fusible with Yellow Coating: DIC-UTB-YE.

**Glass Sheet Size** is approximately 16" x 16" with clipmarks.  
 (No corners are cut off.)

**Glass is Priced per Sheet.**

## Coming soon...

Available by special order.

DichroLux fires to a very smooth finish. This coating differs from the very popular crazing effect of Dichromagic. In addition, it can handle the very high temperatures of a Major Bench Burner. Extensive testing has been done using Borofloat, Moretti (Effetre), System 96 and other glasses, ensuring that this coating can be used directly in the flame with no burnout conditions.

DichroLux colors are referenced by the REFLECTION after firing.

DL- must be in front of the glass code and color code when ordering.

Example: DLBF175-RE is DichroLux Borofloat 1.75mm Red (Reflection).
